SUBJECT INDEX
VOLUME 48

Adeno-associated virus
  chromatin-like structure of DNA, 79
Adenovirus
  type 2
    DNA-binding protein gene, 31
    independent, spontaneous mutants, 31
    major late transcription unit, 127
    monkey cells, 31
    polyadenylic acid addition sites, 127
    simian virus 40 hybrid, 31
Aleutian disease virus
  antigen expression
    recombinant plasmid, 573
  molecular cloning, 573
  recombinant plasmid
    antigen expression, 573
Antibody
  anti-idiotypic
    rabies virus glycoprotein, 660
  antipeptide
    human adenovirus 2 E1B-19K tumor antigen, 604
    human adenovirus 2 E1B-53K tumor antigen, 604
  monoclonal
    anti-hemagglutinin, 239
    avian sarcoma virus transforming proteins, 352
    baboon endogenous virus cell receptors, 697
    group B coxsackieviruses, 561
    influenza virus A/PR/834, 239
    inhibition of virus attachment, 561
    irreversible antigenic alterations, 239
    Newcastle disease virus, 440
  neutralizing
    rabies virus glycoprotein, 660
  nonapeptide, 709
  poliovirus
    bivalent attachment, 547
    conformational alteration and neutralization, 547
    genome-linked protein VPg, 429
    NH_2 terminus, 429
    synthetic nonapeptide, 429
  polyomavirus, 709
Antigen
  Aleutian disease virus
    recombinant plasmid, 573
  middle T
    nonapeptide, 709
    polyomavirus, 709
  super T
    simian virus 40, 492
    transformed mouse cells, 492
  surface
    duck hepatitis B virus, 534
    hepatitis B virus, 271
    major polypeptide, 534
    synthesis in mammalian cells, 271
  T
    early replicating DNA intermediates, 281
    simian virus 40 chromosome complexes, 281
  tumor
    antipeptide antibodies, 604
    human adenovirus 2 E1B-19K, 604
    human adenovirus 2 E1B-53K, 604
Autographa californica
  nuclear polyhedrosis virus
    novel RNA polymerase, 641
    S. frugiperda cells, 641
    viral transcription, 641
Avian myeloblastosis virus
  c-*myb* transduction
    cellular gene, 565
    points of recombination, 565
Avian oncovirus
  MH2
    molecular cloning of proviral DNA, 61
    structural analysis of viral RNA and protein, 61
Avian retrovirus
  DNA discontinuities, 654
  pp12 protein
    interaction with viral RNA, 361
Avian sarcoma virus
  monoclonal antibodies
    transforming proteins, 352
  transforming proteins
    monoclonal antibodies, 352

Baboon endogenous virus
  cell receptors
    monoclonal antibodies, 697
  monoclonal antibodies
    cell receptors, 697
Bacteriophage
  Cp-1
    protease-sensitive transfection of *S. pneumoniae*, 721
  G4
    DNA secondary structure modifications, 170
    enzymatic construction and selection of mutants, 170
    gene expression, 180
    J-F intercistronic region, 170, 180, 186
    mRNA stability, 186
    mutations, 180
  lambda
    dnaB protein, 551
    P protein, 551
    replication, 551
    RNA polymerase interaction, 551
  Mu
    E. coli K-12 DNA polymerase I, 149
    growth, 149
  P4
    α gene, 157
    RNA polymerase, 157
  P2-λ
    interference by *E. coli*, 616
  ϕX174
    gene expression, 180
    J-F intercistronic region, 180, 186
    mRNA stability, 186
    mutations, 180
    simian virus 40 recombinant genomes, 229
  PM2
    gram-negative host, 774

phosphatidylethanolamine accessibility, 774
SPO1
gene 27, 555
T4
cytosine, 18
in vivo cleavage, 18
T7
direct physical assay, 647
in vitro DNA recombination, 647
BHK cells
lymphocytic choriomeningitis virus
persistent infection, 262
RNAs, 262
viral proteins, 262
Sindbis virus
defective-interfering RNAs, 678
persistent infection, 678
virus RNAs, 678
Bluetongue virus
neutralization
molecular basis, 627
Bovine cells
bovine viral diarrhea virus
virus-specific RNA, 320
Bovine parvovirus
proteins, 10
Bovine viral diarrhea virus
bovine cells
virus-specific RNA, 320

Campoletis sonorensis virus
parasitized host *Heliothis virescens*, 74
Carcinoma
nasopharyngeal
Epstein-Barr virus transcription, 580
Cellular transcription
inhibition
vesicular stomatitis virus, 88
Chickens
Fujinami sarcoma virus
tumors, 744
Rous sarcoma virus
tumors, 744
tumors
Fujinami sarcoma virus, 744
Rous sarcoma virus, 744
Chromatin
adeno-associated virus DNA structure, 79
Chromosome
human 5
assignment of c-*fms* locus, 770
molecular cloning of c-*fms* locus, 770
Chromosomes
replicating simian virus 40
α-like DNA polymerase, 304
in vitro DNA synthesis, 304
simian virus 40 T-antigen complexes, 281
Coxsackievirus
group B
inhibition of attachment, 561
monoclonal antibodies, 561
Cytosine
bacteriophage T4
in vivo cleavage, 18

Duck hepatitis B virus
surface antigen
major polypeptide, 534

Electron microscopy
microinjected simian virus 40
spliced cRNA, 296
Epidermodysplasia verruciformis
human papillomavirus 8, 340
human papillomavirus 10, 340
human papillomavirus 3a, 340
human papillomavirus 12, 340
Epstein-Barr virus
abortive cycle
transcription of two distant clusters of partially homologous small repeats, 731
DNA molecule organization
mRNA transcript, 135
*Not*I repeat units, 135
P3HR-1 deletion junction, 135
template, 135
12-*O*-tetradecanoylphorbol-13-acetate, 135
lytic cycle
transcription of two distant clusters of partially homologous small repeats, 731
nasopharyngeal carcinoma
transcription, 580
transcription
nasopharyngeal carcinoma, 580
Escherichia coli
bacteriophage P2-λ interference, 616
K-12
bacteriophage Mu growth, 149
DNA polymerase I, 149
Eucaryotic cells
herpes simplex virus
class I defective DNA, 384
European Elk papillomavirus
characterization of genome, 370
induction of tumors in animals, 370
transformation in vitro, 370
Exonuclease
alkaline
herpes simplex virus type 1, 591

Feline sarcoma virus
Snyder-Theilen
epidermal growth factor receptor metabolism, 752
human A431 cells, 752
protein kinase activity, 752
Foot-and-mouth disease virus
serotypes
major antigenic determinants, 451
Friend mink cell focus-inducing virus
molecular cloning
normal cells, 542
transformed cells, 542
normal cells
molecular cloning, 542
transformed cells
molecular cloning, 542
Fujinami sarcoma virus
fps gene
free of *gag* gene sequences, 744

induction of tumors in chickens, 744
transformation of cells in culture, 744

Glycosylation
simian rotavirus SA11 gene segment 10
noncleaved signal peptide, 335
Ground squirrel hepatitis virus
livers
asymmetrical heterogeneous forms, 1
closed circular viral DNA, 1

Hamster tumor cell line
integrated polyomavirus DNA
structural analysis, 40
Heliothis virescens
parasitized host
C. sonorensis virus, 74
Hemagglutinin
influenza virus A/PR/834
acid activation of hemolysis, 239
mediation of hemolysis, 239
monoclonal antibodies, 239
influenza virus H3
antigenic drift, 52
multiple evolutionary pathways, 52
sequential amino acid changes, 52
monoclonal antibodies
influenza virus A/PR/834, 239
irreversible antigenic alterations, 239
Hemolysis
influenza virus A/PR/834
acid activation, 239
mediation, 239
Hepatitis B virus
surface antigen
expression of coding region, 271
expression of entire gene, 271
synthesis in mammalian cells, 271
Herpes simplex virus
class I defective DNA
eucaryotic cells, 384
molecular cloning vehicle, 384
eucaryotic cells
class I defective DNA, 384
insertion mutants
duplication of glycoprotein D gene, 396
two forms of glycoprotein D, 396
type 1
alkaline exonuclease, 591
capsid protein, 591
glycoprotein D synthesis and processing in vitro, 521
glycoproteins, 325
high-resolution characterization of transcripts, 591
N-acetylgalactosaminyltransferase activity, 325
O-glycosylation, 325
short unique region, 460
*Sma*I fragment, 460
transcribed RNAs, 460
type 2
glycoprotein D synthesis and processing in vitro, 521

Herpesvirus saimiri
transformed lymphoid tumor cell line
virus-specific transcription, 377
Human A431 cells
Harvey murine sarcoma virus
epidermal growth factor receptor metabolism, 752
protein kinase activity, 752
Kirsten murine sarcoma virus
epidermal growth factor receptor metabolism, 752
protein kinase activity, 752
Snyder-Theilen feline sarcoma virus
epidermal growth factor receptor metabolism, 752
protein kinase activity, 752
Human adenovirus
2
antipeptide antibodies, 604
COOH terminus, 604
E1B-19K tumor antigen, 604
E1B-53K tumor antigen, 604
NH_2 terminus, 604
Human papillomavirus
8
biochemical characterization, 340
epidermodysplasia verruciformis, 340
molecular cloning, 340
10
biochemical characterization, 340
epidermodysplasia verruciformis, 340
molecular cloning, 340
3a
biochemical characterization, 340
epidermodysplasia verruciformis, 340
molecular cloning, 340
12
biochemical characterization, 340
epidermodysplasia verruciformis, 340
molecular cloning, 340
Human rhinovirus
host range mutants
altered nonstructural proteins, 410

Influenza virus
A/PR/834
acid activation of hemolysis, 239
irreversible antigenic alterations, 239
mediation of hemolysis, 239
monoclonal anti-hemagglutinin antibodies, 239
H3 hemagglutinin
antigenic drift, 52
multiple evolutionary pathways, 52
sequential amino acid changes, 52
Interferon
retrovirus
inhibition of DNA supercoiling, 120

Leupeptin
mouse fibroblasts
inhibition of retrovirus infection, 765
retrovirus
inhibition of infection in mouse fibroblasts, 765
Lymphocytic choriomeningitis virus
BHK cells
persistent infection, 262
RNAs, 262
viral proteins, 262

persistent infection
BHK cells, 262
intracellular agent, 249
standard cell lines, 249
standard cell lines
persistent infection, 249
Lymphoid tumor cell line
H. saimiri-transformed
virus-specific transcription, 377

Mammalian cells
hepatitis B surface antigen
synthesis, 271
Mink cell focus-forming virus
mouse chromosomal locus
genetic mapping, 300
replication
mouse chromosomal locus, 300
Monkey cells
adenovirus type 2-simian virus 40 hybrid
adenovirus type 2 DNA-binding protein gene, 31
independent, spontaneous mutants, 31
Mouse fibroblasts
leupeptin
inhibition of retrovirus infection, 765
retrovirus
inhibition of infection by leupeptin, 765
Mouse hepatitis virus
replicative-intermediate RNA
leader RNA sequences, 633
nascent chains, 633
Mouse lymphoid cells
leukemic
retrovirus *env* transcript, 102
normal
retrovirus *env* transcript, 102
Mouse mammary tumor virus
env gene products
proteolytic cleavage sites, 314
terminal amino acid sequences, 314
Murine leukemia virus
BALB/c
physical mapping of *Fv-1* tropism host range determinant, 685
BALB/c B-tropic
Fv-1 host range property, 779
nucleotide sequences of *gag-pol* regions, 779
BALB/c N-tropic
Fv-1 host range property, 779
nucleotide sequences of *gag-pol* regions, 779
B-tropic
genome, 110
in vitro restriction endonuclease fragment exchange, 110
molecular clone, 110
reversal of *Fv-1* host range, 110
N-tropic
genome, 110
in vitro restriction endonuclease fragment exchange, 110
molecular clone, 110
reversal of *Fv-1* host range, 110
Murine sarcoma virus
Harvey
epidermal growth factor receptor metabolism, 752
human A431 cells, 752
protein kinase activity, 752
Kirsten
epidermal growth factor receptor metabolism, 752
human A431 cells, 752
protein kinase activity, 752

N-Acetylgalactosaminyltransferase
herpes simplex virus type 1 glycoproteins, 325
Newcastle disease virus
epitopes
monoclonal antibodies, 440
HN glycoprotein
monoclonal antibodies, 440
monoclonal antibodies
four epitopes, 440
HN glycoprotein, 440
Nuclear polyhedrosis virus
A. californica
novel RNA polymerase, 641
S. frugiperda cells, 641
viral transcription, 641

O-glycosylation
herpes simplex virus type 1 glycoproteins, 325

Phosphatidylethanolamine
accessibility in bacteriophage PM2 and gram-negative host, 774
Phosphorylation
polyomavirus major capsid protein VP1, 206
Plasmid
recombinant
Aleutian disease virus antigens, 573
Poliovirus
antibody
bivalent attachment, 547
conformational alteration and neutralization, 547
genome-linked protein VPg, 429
genome-linked protein VPg
antibody, 429
NH_2 terminus, 429
synthetic nonapeptide, 429
in vitro RNA replication
inhibition, 429
native VPg, 429
NH_2 terminus
genome-linked protein VPg, 429
specific proteins
synthesis and cleavage, 309
synthetic nonapeptide
genome-linked protein VPg, 429
Polyadenylic acid
adenovirus type 2 major late transcription unit
addition sites, 127
Polyomavirus
A2
comparison with polyomavirus Crawford small-plaque variant, 472
antibodies
cross-reaction with cellular protein(s), 709
middle T antigen, 709
nonapeptide, 709
cellular protein(s)

antibodies, 709
middle T antigen, 709
Crawford small-plaque variant
comparison with polyomavirus A2, 472
comparison with polyomavirus strain 3, 472
DNA sequence, 472
integrated DNA
hamster tumor cell line, 40
structural analysis, 40
major structural protein VP1
carboxy-terminal region, 197
chemical cleavage, 197
cleavage products, 197
major phosphorylation region, 206
nonphosphorylated species, 206
phosphorylated species, 206
receptor moiety, 197
middle T antigen
antibodies, 709
cross-reaction with cellular protein(s), 709
nonapeptide, 709
nonapeptide
antibodies, 709
middle T antigen, 709
strain 3
comparison with polyomavirus Crawford small-plaque variant, 472
Protease
bacteriophage Cp-1 DNA
transfection of *S. pneumoniae*, 721
S. pneumoniae
transfection by bacteriophage Cp-1 DNA, 721
Protein kinase
Harvey murine sarcoma virus
human A431 cells, 752
human A431 cells
Harvey murine sarcoma virus, 752
Kirsten murine sarcoma virus, 752
Snyder-Theilen feline sarcoma virus, 752
Kirsten murine sarcoma virus
human A431 cells, 752
Snyder-Theilen feline sarcoma virus
human A431 cells, 752

Rabies virus
anti-idiotypic antibodies
glycoprotein, 660
glycoprotein
anti-idiotypic antibodies, 660
neutralizing antibodies, 660
neutralizing antibodies
glycoprotein, 660
Restriction endonuclease
fragment exchange in vitro
murine leukemia virus genomes, 110
reversal of *Fv-1* host range, 110
Retrovirus
DNA supercoiling
inhibition in interferon-treated cells, 120
env transcript
leukemic mouse lymphoid cells, 102
normal mouse lymphoid cells, 102
interferon-treated cells
inhibition of DNA supercoiling, 120
leupeptin
inhibition of infection in mouse fibroblasts, 765
mouse fibroblasts
inhibition of infection by leupeptin, 765
Rotavirus
SA11
gene coding assignments, 330
gene products, 330
segments 7, 8, and 9, 330
Rous sarcoma virus
115-nucleotide direct repeat
cis-acting RNA packaging locus, 667
Schmidt-Ruppin-A
induction of tumors in chickens, 744
src gene, 744
transformation of cells in culture, 744

Serine
simian virus 40 VP1 mutant
codons, 405
Simian rotavirus
SA11
coding assignment, 335
gene segment 10, 335
glycosylation sites, 335
noncleaved signal peptide, 335
nucleotide sequence, 335
Simian virus 40
adenovirus type 2 hybrid
DNA-binding protein gene, 31
independent, spontaneous mutants, 31
monkey cells, 31
bacteriophage ϕX174 recombinant genomes
single cells, 229
structure, 229
chromosome–T-antigen complexes
early replicating DNA intermediates, 281
functional origin of replication
super T antigen generation, 492
transformed mouse cells, 492
in vitro DNA replication
initiation, 481
late mRNA forms
5' end sequences, 503
microinjected
electron microscopy, 296
spliced cRNA, 296
nonhomologous recombination pathway
quantitation, 218
replicating chromosomes
α-like DNA polymerase, 304
in vitro DNA synthesis, 304
super T antigen generation
functional origin of replication, 492
transformed mouse cells, 492
transformed mouse cells
functional origin of replication, 492
super T antigen generation, 492
VP1 mutant
missense mutations, 405
serine codons, 405
suppression, 405
viral agnogene, 405
Sindbis virus
BHK cells
defective-interfering RNAs, 678
persistent infection, 678

virus RNAs, 678
persistent infection
BHK cells, 678
defective-interfering RNAs, 678
virus RNAs, 678
Spodoptera frugiperda cells
A. californica nuclear polyhedrosis virus
novel RNA polymerase, 641
viral transcription, 641
Streptococcus pneumoniae
bacteriophage Cp-1 DNA
protease-sensitive transfection, 721
protease-sensitive transfection
bacteriophage Cp-1 DNA, 721
Supercoiling
interferon-treated cells
inhibition, 120
retrovirus DNA
inhibition, 120

12-*O*-Tetradecanoylphorbol-13-acetate
Epstein-Barr virus
mRNA transcript, 135
Transformed mouse cells
simian virus 40
functional origin of replication, 492
super T antigen generation, 492

Tumors
chickens
Fujinami sarcoma virus, 744
Rous sarcoma virus, 744
European Elk papillomavirus, 370
Fujinami sarcoma virus
chickens, 744
Rous sarcoma virus
chickens, 744

Vaccinia virus
WR
correlation of genetic and physical maps, 419
marker rescue, 419
temperature-sensitive mutations, 419
Vesicular stomatitis virus
serotype Indiana
inhibition of cellular transcription, 88
viral leader RNA, 88
serotype New Jersey
inhibition of cellular transcription, 88
viral leader RNA, 88
Viral leader RNA
vesicular stomatitis virus
inhibition of cellular transcription, 88
serotype Indiana, 88
serotype New Jersey, 88
